In another experiment, this time for children, we started the library's LEGO program for ages 6-12. This has been an incredibly successful program. 60 children signed up for 6 Saturday afternoon learning experiences. Brian Chester, a wonderful high school volunteer, has presented the program to the children and our young creators have made some really wonderful items.

Why am I focusing on these two programs? **Because I also believe the library can be an incubator for thought and creation.** We have space for many projects and although we will remain traditionally a repository for information and a place for free books, we can also be a place that brings people together to learn create and think. This fall we have a few more programs to try out including Classical Crayons -- a program where children will be introduced to classical or jazz music and be able to free draw. Lauren has said she will help me develop more art history learning experiences for adults.

Thanks to the Staff, our volunteers and the community for making all this happen. The library as always is an exciting place to work.
