A Community of Learners

Information Memo: Village Storm Water Project

TO: School Board
Trisha Kocanda, Superintendent

FROM: Greg Kurr, CFO

January 26, 2016

Background:

Administration was asked in November to attend a meeting with Village personnel. Attendees at the meeting included consulting engineers. The general topic was the Village's planned development of an alternative plan for storm water control. They explained that part of the plan may include the desired use of the District field between Skokie and Washbourne schools and to a less likely extent the field at the south end of Crow Island school. As a result of the conversation, Administration indicated that the District would certainly be open to continued conversation regarding the plan as it developed in the spirit of community interests with no certain commitment to use of District property.

The Village scheduled open forums with community members to present and solicit comments regarding storm water management alternatives on Thursday January 21, 2016 and Saturday January 23, 2016. As part of Thursday's presentation, only having discussion with the District was mentioned.

As the Village's plans become more definitive the District's Administration and Board will likely become a more intricate party to the process.
