

Easy to Install, Code Compliant Adjustable Deck Tension Tie

In an effort to make residential decks safer, the 2015 International Residential Code (IRC) has included prescriptive construction details that require the builder to install connections to transfer lateral loads from the deck to the house structure. Here is why the ADTT-TZ could be your easy answer.

- ADTT-TZ connector transfers lateral loads from the deck to the house structure.
- Exclusive adjustable design accommodates multiple deck joists: 2 x 8, 2 x 10, 2 x 12.
- Exceeds 2015 International Residential Code (IRC) lateral attachment requirements for decks. Section 507.2.4.
- Exceeds the minimum required tension load of 750 lbs. in four (4) locations on the deck per IRC Figure R507.2.3 (2).
- 2 hole break out washer (BO-W) will work with multiple screw sizes.
- Adjustability eliminates the need for additional blocking in most applications.
