

Collaboration on Your Deck

Most deck projects start out as an image. Whether it's an image in the mind of the creator, or a sketch on a napkin or a scrap piece of lumber. While an image in your mind may seem beautiful a physical drawing is a good place to start, because it's the basis of communicating a design between the builder and end user. We have a remarkably powerful and user friendly tool to get your customers' deck projects from their mind to paper and then off to the best possible start.

With our free online software, USP Deck Designer, collaborating with clients couldn't be easier. To get started first, import photos of the house (if you have them), then design the deck around it in 3D. The 3D deck design is created in our Deck Designer program.

USP Deck Designer 2.0 will allow you to design templates of standard size decks that your customers can log into and change to their idea of a perfect deck; Colors, materials and railing styles can be changed and tallied with a click and a drag of the mouse. This is a perfect tool for sales, design and overall customer satisfaction.

Finally, print out complete materials and cut lists, along with permit submittals. USP Deck Designer 2.0 helps. And then bring your client's deck vision to life.
