

New Evaluation Reports for Structural Products

The MiTek Builder Product Engineering team works with the various building code product evaluation services to obtain and maintain evaluation reports on our structural products. Here are the highlights of what's taken place in the last few months:

- ICC-ES **ESR-2787** was recently revised to include the **FA4 / FA4-TZ** foundation anchors.
- LA City **RR 25749** has been recently revised to include **HBPH, KEGQ, KLB, KB, KGB & KHGB** series.
- ICC-ES **ESR-3847** is a brand new report containing the **HTT16** and **HTT45** tension ties. This report is evaluated to the 2015 IBC/IRC and valid until May 2017.
- LA City **RR 26048** is based upon ICC-ES ESR-3847 which contains the **HTT16** and **HTT45** tension ties. This report is evaluated to the 2014 LABC and valid until May 1, 2017.

This an ongoing process and you will see new or updated reports posted online throughout the year. You will also see this data reflected in our next release of USP Specifier v1.5.
