BECOME A PERMEABLE PAVER INSTALLER SPECIALIST!

PICP SPECIALIST COURSE

COURSE DESCRIPTION:

More projects are being specified with environmentally friendly pavements. This one-day classroom-based course trains experienced contractors about the differences of installing PICP versus regular interlocking concrete pavement systems. The course is aimed at contractors who currently perform residential or commercial concrete pavement installations and wish to move into the permeable pavement market.

It is recommended (but not required) that participants have completed the ICPI Concrete Paver Installer Course prior to attending this course. A PICP Specialist designation may be earned by meeting additional requirements. 7 CE Credits offered.

Upon successful completion of the course and exam, participants will receive a Record of Completion from ICPI about a month after ICPI receives the course materials.

THURSDAY
FEBRUARY 18, 2016

SISLERS STONE
165 Bradstone Lane
Harpers Ferry, WV 25425
