

## **EARTHQUAKERS ~ UPDATE**

Banning Engineering had the privilege of supporting the Plainfield FIRST Robotics Competition team at the Purdue District event in March. Two of our employees who are parents of student team members went along to chaperone. [Dean Kamen](#), founder of FIRST robotics, gave the opening ceremony address in person, inspiring students to imagine and achieve.

The students overcame many challenges as they developed their teamwork, construction, and programming skills. Congratulations to the Earthquakers for their dedication and time to represent our school and community. With over 85,000 [FRC](#) teams in 80 countries, we are pleased to participate in advancing engineering and technology in our local schools.
