

Boston Section Technical Meeting
Tuesday February 25, 2014
Minuteman Regional Technical School
758 Marrett Road Lexington, MA 02421
5:30 PM

Come and see the Weld Vac, The Weld Vac is an industry changing invention. It is environmentally conscious, semi-green technology used for back gouging, and weld removal. It utilizes a vacuum system to remove simultaneously from the source all of the particulate matter, smoke, toxic gas, sparks and molten metal generated during the process.

Local welder business owner Charles Klangos of CSK Mechanical from Lowell, MA invented the Weld Vac. Charlie came up with this idea out of necessity for a job he was working on. From there he has been working to refine the process of its operation and organized a team of professionals to have the product patented and eventually bring it to market. The Boston section members are fortunate to have the opportunity to see a sneak preview of this unique tool.

Please contact me Tom Ferri via email @tferri@victortechnologies.com or call 508-527-1884 so we will have an idea how many will come. The presentation/demonstration will be in the Metal Fabrication and Welding shop located on your left when you enter the school grounds. There will be signs directing you towards the event.

Tom Ferri
Victor Technologies Northeast
District Sales Manager
American Welding Society
District One Director (508) 527-1884
