

Downloading Windows critical updates

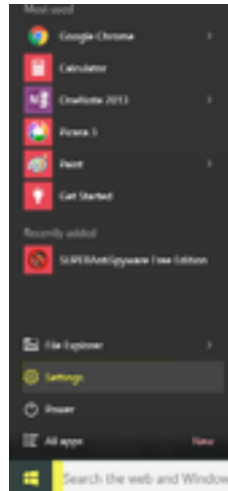

The device must be plugged into power or have at least 50% battery life

This process WILL require access to a wireless network

Updates that are interrupted can make your device **UNUSABLE**.

Allow an hour for this process.

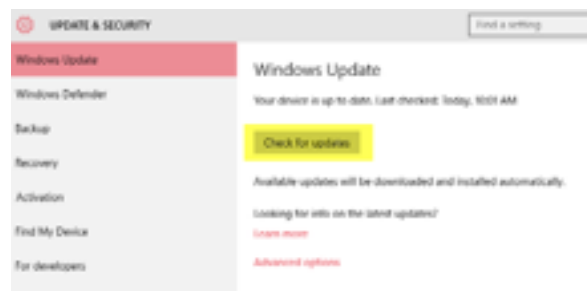

1. Click on the Windows button > click on Settings

2. Click on Update & Security

3. Click check for updates

4. The updates available at this time will download and install then eventually bring you to a restart screen.
5. Choose restart now.
6. Updates complete
