

GREEN FLEET PROGRAM

Program Overview

South Shore Clean Cities (SSCC) manages the Northwest Indiana Green Fleet program for our local Metropolitan Planning Organization (MPO), Northwestern Indiana Regional Planning Commission (NIRPC). The goal of the program is to significantly improve the environmental performance of business and governmental vehicle fleets across NIRPC's territory of Lake, Porter, and LaPorte County through diesel retrofits and other strategies. The goal of the program is to work with these governmental fleets to help mitigate barriers to adopting alternative fuels and advanced technology vehicles, and create policies that support petroleum and vehicle emission reductions.

Fleet Review

SSCC staff will work with your fleet manager to collect basic information about your vehicles. They will then analyze the fleet information, determine needed equipment, and make recommendations on how to improve your fleets performance. Fleet representatives will then review and sign a contract before an installation plan is developed and equipment is ordered.

Chosen communities will receive the following:

- A fleet review
- Fleet training on green driving initiatives through Clean Cities University
- Assistance with press releases, events, and presentations
- Guidance with finding and applying for eligible funding to improve/update fleet equipment

If your community is interested in participating in the program, please fill out the information below and SSCC Green Fleet Project Manager **Catherine Yoder** will contact you to schedule a meeting. Catherine's contact information is cyoder@southshorecleancities.org | (219) 644-3690 | 9800 Connecticut Dr., Crown Point, IN 46307
