

The winter season is an excellent time to schedule a pruning for your trees. We would be more than happy to thin and shape your ornamentals and fruit trees before the spring season is upon us. Scheduling a pruning during this time can be extremely beneficial in more ways than one. Thinning and shaping keeps the snow from collecting and causing damage, not to mention it promotes healthy and strong limbs. Furthermore, pruning can open up an aesthetically pleasing view for you and any passersby. The winter season also allows the freshly pruned wounds to heal without any pathogens in the air, since they are not active in this cold weather. Setup

for a pruning now and your trees will thank you in the summer.

Now is a perfect time to add or expand on any retaining wall for your property. The ground has yet to freeze which allows us to install a retaining wall that will be ready for any planting you

may have planned once spring arrives. As stated before we are able to build a wall from scratch, expand on an existing wall, or make repairs on a wall that may have succumbed to the elements. We are capable of installing natural stone walls or segmental block walls depending on your preference. Please do not hesitate to contact us with any inquiries, we would be happy to hear from you.
