GREEN APPS (ANDROID) RUNDOWN

By Tom Hocking, Quentin UCC

As smartphones and tablets are becoming increasingly popular, a large number of apps have been developed relating to Green Justice Ministry topics. Unless otherwise specified, all apps are FREE and available from the Google Play App Store. This is not an exhaustive list by any means, but here are some good ones to check out:

CARBON CLOCK

A clever app in UK English that tracks tons of CO₂ emitted since opening the app. If you tap the display, it shows current global ppm of CO₂. Tapping again shows the cumulative total tons emitted in the age of man.

CARBON FOOTPRINT CALC

A straightforward calculator that shows you how much carbon you are using based upon the information you provide it. It can be eye-opening to someone who has not used one before.

LOTUS GREENS GREENABILITY: Your ability to be green!

Another calculator which uses info about lifestyle and travel habits to suggest ways to improve your green quotient.

GREEN TIPS FOR ANDROID

A wonderful source of green how-to tips that can turn you into the green living know-it-all in the room...

HYDROS FOOTPRINT

A simple calculator for finding out how much water your lifestyle consumes.

More apps roll out daily it seems, so do a search using green justice keywords in the App Store to find new titles. Have a great Autumn!
