

OUR PEOPLE TAKE PRIDE IN THEIR WORK

PROMOTIONS:

Rodrigo Antezana started his career with S&D as an intern in the summer of 2010 creating O&Ms. He continued his internship while attending school to earn his Mechanical Engineering degree at the University of Maryland. After graduation, he was promoted to a Project Engineer, and now will be working as a Project Manager on our Center Stage project.

Rodrigo offered the following advice to construction professionals considering a Project Management position, “continue to work hard and absorb as much as possible from fellow Project Managers and Project Executives. Be proactive by asking to take on new tasks (when possible) to develop fundamental Project Management Skills.”

Amanda Shapiro attended James Madison University and earned a degree in Engineering with minors in both math and business. During her collegiate years, she interned for Shapiro & Duncan in the Construction Department. She worked in the Estimating Department for a short period of time and then moved to Engineering Department where she could utilize her education. Amanda says, “ my keys to success were never being afraid to ask questions and always doing what one promises.”

Now promoted to Mechanical Engineer, Amanda is expected to know and carry out the steps it takes to create a successful design; coordinate with other members of the team; and to work with other trades to get a design complete and ready for construction.

Dan Zimmerman started his career with S&D as a construction intern in 2005 while attending Montgomery College. After transferring to University of Maryland and earning a Bachelor of Science in Mechanical Engineering, he came back to work for S&D as a Project Engineer.

Recently, promoted as Design Build Manager, Dan takes the lead engineer role on major projects; develops proposals for potential new work,; guides younger engineers through projects and coordinates the efforts of engineers on major projects.
