

On July 13th, the Reality Capture Technology Training Center will open our second annual summer technology training camp. Digitally documenting the historic buildings and structures at History Park, our students will receive hands on training in state of the art laser scanning technology.

On Tuesday afternoon, July 14th, Matt Daly of FARO Technologies will join us for a tutorial of FARO Scene software. At that time, Matt will demonstrate the registration and process for creating the 3D point clouds from the data gathered by our students. The demonstration will take place between 1:30pm and 3:30pm at the History San Jose Collection Center, located at 1661 Senter Road.

I'd like to extend an invitation to you and offer you an opportunity to witness and participate in this hands-on workshop. The skills and technology are applicable to many disciplines and vocations. We would welcome you and/or a representative of the Black Chamber of Commerce to join us for this interesting workshop.
