

SurgiQuest, Inc. is a small, (~100 people) growing medical device company based in Milford, CT. SurgiQuest designs, manufactures, and distributes our own proprietary technologies for minimally-invasive surgery. We are looking for a talented engineer to join our Development Engineering team. This is a small, non-traditional group that covers a wide range of needs based around the innovative AirSeal system. This group enjoys great visibility within the organization and maintains an “all-in” culture that delivers results fast. Responsibilities may include global and domestic travel, building systems-based solutions, interacting with surgeons and sales people in the field (including the Operating Room), and solving challenging and complex problems. The right candidate with the right attitude will be prioritized over experience. Contact Miki Silver (Development Engineer at SurgiQuest, Carnegie Mellon BME Masters '13) if you are interested. Please send your resume in an email to Miki at msilver@surgiquest.com. SurgiQuest is looking to hire the perfect candidate as soon as possible. Quick responses are highly appreciated.
