

SPECIALIZED LOGGING INSURANCE

Equipment / Inland Marine • General & Umbrella Liability • Auto • Property

We are passionate about protecting your business.

"One of the things we needed was insurance for the logging industry. What better way to get the insurance that we need than to help design the American Loggers Insurance Program. American Loggers Insurance Program, written through your local agent, is cost-effective, controls losses and really encourages safety. It works for us." - Rudy Pelletier

COVERAGE *customized for logging's unique requirements*

CLAIMS SERVICES *with in-house specialists to get you back in business as quickly as possible*

LOSS CONTROL *with in-house experts that minimize risk and maximize protection*

The **#1** most preventable cause of timber harvesting equipment losses is **fire**.

Automatic Fire Suppression (AFS) System + Manual Coldfire or Loaded Stream

- Saves equipment
- Minimizes downtime
- Guarantees cost savings

We are proud to recognize Fogmaker North America, a water mist based AFS system, as a chosen partner & preferred AFS System manufacturer.

In **85%** of fires, a machine protected by an approved AFS System is **saved** with only minor damage.

based on 20 years' experience by a Northeast insurer

American Loggers Insurance is a nationwide insurance program offering affordable coverage in the Logging and Forestry industries and is distributed by Santee Risk Managers LLC through local insurance agents. Lloyd's provides the coverage for the equipment division of the American Loggers Insurance Program.

Coverholder at **LLOYD'S**

COVERAGE THAT KEEPS YOU MOVING

PROTECTING THOSE WHO WORK THE WOODS

FOCUSED ON FIRE PREVENTION

Be proactive. Avoid equipment loss.

We are passionate about protecting your business.

"The American Loggers Insurance Program has found the best ways to save equipment and to save customers' money. Automatic Fire Suppression Systems detect and extinguish fires before they do great damage. A loaded stream/coldfire extinguisher immediately cools and penetrates whatever is burning. It has been proven that the combination of these devices saves equipment. We are ready to take these equipment saving measures all across America." - Bobby Goodson

AUTOMATIC FIRE SUPPRESSION *the benefits of water mist systems*

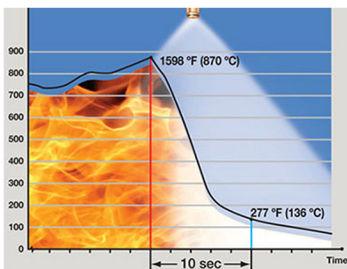

- Attacks all 3 elements of the fire triangle
- Longer cooling & suppressing time
- Re-flash prevention

Swamp Loggers Fire Suppression is the direct source of distribution, installation & service requirements of AFS Systems.

At **ALI** we anticipate that water mist systems, like Fogmaker, will develop **an even better record** in forestry equipment saves, due to wetting & cooling effects that are not possible with dry chemical.

Patented high-pressure technology that attacks all 3 components

 Environmentally friendly

Nothing destroys more forestry equipment than **fire**.
