

Coated Engine Bearings

E15000 SERIES COATED PERFORMANCE BEARINGS

All the features of our E15000 bearings, plus Duroshield, a friction reducing polymer coating. This micro-thin layer featuring an advanced molybdenum disulfide in a polymer base provides exceptional protection during dry starts and other situations when oil supply to the bearing face is interrupted. The Duroshield coating chemically bonds to the bearing surface and is engineered to absorb oil for enhanced lubricity in a full range of performance conditions.

- Low coefficient of friction & ultra high load capacity
- Solid film lubricant - excellent lubricity
- Enhanced durability in extreme operating environments
- Excellent oil retention - absorbs oil
- “Cheap insurance” - if oil lubrication is interrupted
- Combination of coating & oil film lubricants minimizes wear
- An extra layer of protection
