Comprehensive Training in Parenteral Moderate Sedation

Safely and confidently treat your anxious adult patients by performing moderate sedation. This certifying course includes lectures and clinical training by the renowned Drs. Kenneth Reed, Amanda Okundaye, Andrea Fonner, Stanley Malamed, and Jason Brady.

After completing this comprehensive course, you'll feel confident administering parenteral moderate sedation to your patients. Didactic discussion includes pharmacology, patient evaluations, airway management, medical emergencies and venipuncture techniques.

During the clinical portion of the course, participants will start IVs and administer sedative agents while performing clinical dentistry. Unlike other programs, we prepare participants for real-life practice by having them perform both the sedation and dentistry on a minimum of twenty patients. We allow participants to choose procedures with which they are most comfortable and we supply the appropriate, pre-screened patients for this course.

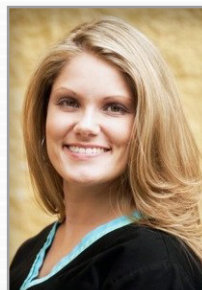

This course is valuable for dentists who would like to obtain a moderate sedation permit and those who need additional training to meet current standards. It meets or exceeds ADA standards for parenteral moderate sedation, which is the standard for most states.
