Project Categories

- Riparian and creek restoration
- Invasive species management
- Wetland restoration
- Nutrient management
- Land use issues
- Water quality
- Outreach and communication
- Education

About the WLP Program

The Watershed Legacy Program (WLP) works with landowners and watershed stewardship groups alike to help design, fund, and execute projects that have a positive and tangible impact on our watershed.

Objectives of the WLP

The OWC facilitates the implementation of sustainable land management practices for landowners and watershed stewardship groups who wish to improve their operations, and the health of their stock and crop, while making a significant contribution to watershed health.

WLP success stories and leadership are showcased as encouragement to other landowners, stewardship cooperatives, and communities within the watershed and the province at large.

Why watershed stewardship?

It is essential to improve the integrity of our landscapes and foster awareness in present and future generations. To do this, we rely on the current caretakers of the land to set the standard upon which we can model our future.

How can we help?

- > Identification and prioritization of areas and resources required to maintain a healthy, intact local watershed.
- > Collaboration with stewardship groups, landowners, technical experts, funding partners, and the public to find solutions to issues affecting the watershed .
- > Technical assistance, funding, and administrative support for watershed projects.
- > Communicate positive stories to help people appreciate rural stewardship.
