

## Sketches of “Visions” of Tahoe City.

As you review these, imagine what these 4+ story buildings will look like from the ground level – and *without trees* (as seen in the Heavenly Village redevelopment project, many trees are often cut for the project, and those remaining often die off). Also, assume no green lawns, as fertilizer is one of the biggest problems for our Lake’s nearshore and is supposed to be discouraged by the agencies. In other words, these sketches do not represent the reality of what these large buildings will look like.

In the 2<sup>nd</sup> image, note that the authors actually state that lake views will be provided for lodging guests – while ‘disturbance to existing views’ will be minimized. Public views of Lake Tahoe will be **BLOCKED!**

*The new lodging opportunity can be terraced into the terrain to provide lake views for guests while minimizing disturbance to the existing viewshed.*
