& training!**

Space is limited—RSVP TODAY!

Electrical skills are critical to the success of every automotive technician. In this hands-on presentation, we will focus on fundamental electricity, better equipping you to deal with the basics of circuits, electrical measurements and circuit defects. We will put a face to electricity that will change the way it is looked at from now on, giving you a consistent strategy for electrical diagnosis. We will also cover the in's and out's of Power Probe.

Technical training will run in the morning with an Owner/Manager roundtable in the afternoon. This class is relevant for everyone in your shop!

You will leave this class with relevant, easy to apply techniques you can return to your shop and immediately use!
