Course Objective

This training course will teach students how to implement Aggregate Storage Option databases (also known as Aggregate Storage option databases). We'll review key differences between aggregate storage and block storage options. Students will learn the different wizards available to assist in the deployment of ASO cubes. We'll also teach the steps to effectively manage and tune your ASO environment. This knowledge is gained through material review and hands on exercises. This course is recommended for Essbase administrators.

Course Outline**Part I. Outline Design**

- ASO vs. BSO
- Application Design
- Dimension and Member Settings
- UDAs, Alternate Hierarchies, and Attributes
- Aggregations
- Compression

Part II. Data, MDX formulas and Report Scripts
