

FOR IMMEDIATE RELEASE:

STEM Enrichment Center Opening in Shreveport

Shreveport, Louisiana – June 15, 2015 – YOUNGS SCHOLARS ENRICHMENT CENTER offers math, science, and leadership development programs for children, summer day camps, tutoring, after school programs, and home school enrichment programs.

“It is very important that children receive a strong math and science foundation and have the skills necessary to be strong and confident leaders”, says Mrs. Washington, the center director.

According to published national research data, students are not well prepared for college level math and science. With the new state core curriculums that are being introduced, students are having additional challenges with learning these subjects. This is a great disparity that Young Scholars hopes to address.

“At Young Scholars, we take the intimidation out of math and science and encourage children to get excited about learning. Our programs are meant to be fun and hands-on, which helps to reinforce concepts. Our programs were created to promote academic achievement and empower youth. We make every effort to ensure that our children succeed in these areas”, says Mrs. Washington

The Founder and Center Director, Christina B. Washington, is an Electrical Engineer and Physicist who understands first-hand the importance of having a strong math and science background. She has always had a passion for mentoring youth, especially in math and science, which inspired her to open the enrichment center.
