Are we living
in an experiment?

See why Recharge lens treatment is worth asking about, especially for patients like you that are connected to the digital world 24-7.

HOYAVISION.COM

RECHARGE

Recharge™ anti-reflective treatment reduces blue light emitted by electronic devices like smartphones, tablets, TVs and even energy efficient light bulbs by 10 percent compared to conventional anti-reflective treated lenses.

Benefits of Recharge Treatment:

- ▶ Blocks up to 10% of harmful blue light waves emitted by electronic devices (Some blue light is important and therefore it is not necessary or desirable to block it all.)
- ▶ Helps alleviate eyestrain, headaches, fatigue and blurred vision
- ▶ Can help improve sleeping patterns
- ▶ Eliminates reflections, repels dirt and dust, and provides superior scratch resistance

**HOYA LENSES ARE ONLY
