

**We are excited to announce that we are now offering a new enhancement to our practice; a tool to assess your health concerns with a new level of accuracy and keep you healthy!**

If you are alive and breathing, you are an infrared being...emitting infrared energy 24 hours day, every day of your life! As your body functions change, so do your infrared patterns. Thermography is the science that gives us the tool to observe and analyze these infrared changes to give you (and us) valuable and possibly unknown information about your health.

### **Why use Thermography?**

Since our bodies are so easily seen with infrared cameras, valuable information about how our body is functioning can be observed. **Why wouldn't we want to observe that very important part of ourselves?** Because Thermography “sees” your body functioning and changing in “real time,” we believe it can be used for screening, early detection of changes and disease *prevention*.

For instance, hot patterns mean “inflammation,” which makes perfect sense. It is so important to “see” inflammation because it is a very active cause of cancer, heart and cardio-vascular disease, diabetes, arthritis and *much more!*

### **How can Thermographic Imaging help you?**

Inflammation is often times a normal healing response, so when we see inflammation we know the body is trying to heal something. Knowing what it's trying to heal helps us focus on important healing programs like diet, detoxification, hormone balancing and stress reduction to reduce that inflammation. We can then observe you “thermographically” over time to assure you that the changes you are making are effective. Truly, we now have the ability to see you in a whole different light!

You can be confident that thermography is safe, painless and affordable. We are highly skilled and experienced, you are in good hands!!

See – Treat – Prevent. What a great idea!!!

### **How are we different?**

Thermography as an imaging service has been available for many years. Technology and techniques have changed and improved significantly over these years, and some providers are still offering services with the old technology. We believe you deserve the best! Since we are imaging the body, we also believe you deserve respect for privacy during the imaging process, so we are excited to offer **Privacy Imaging** in our clinic.

Come and experience the **NEW** Thermography at Roman's Acupuncture & Herbal Clinic.
