

## [Enter Here -->> Forex Decoder](#)

The banner features a dark background with a server room perspective. The text 'FOREX DECODER' is written in a large, glowing, fiery font. Below it, in smaller white text, are the words 'Powerful, Reliable, Safe-Secure, Fast, EA/Metatrader-Compatible VPS Solutions'. On the right side, there are icons for a smartphone, a globe, and a padlock. A white text box with a gold border contains the following text:

**Are you worried about using an automated trading system because your internet connection or computer could go down?**

**We have something that all traders need if they plan on using any kind of automated trading software. The most popular use would be for Metatrader expert advisors. The problem with running automated systems is if you loose internet connection or your computer shuts off unexpectedly, then your trading funds are at risk.**

The solution we came up with is called EA-VPS technology. What this means is that you will have access to your own personal desktop via the web. You will be able to upload your Metatrader, Tradestation, or other trading platforms and let them run on your virtual computer. There are no limits on how many platforms you can have running at once!

This virtual computer will be very reliable at over 99.9% up-time. The only time you will see down-time will be during scheduled maintainance which you will be notified of ahead of time
