President’s Message...

WINDOWS ON HADASSAH, WE ARE NOT WAITING FOR THE FUTURE. WE’RE BUILDING IT”

Hadassah has become a leader and researcher in the field of health care and health with profound impact on the lives of the people around the world. Now that the Jewish calendar has rolled into 5774, and wishes of a “happy and healthy” new year still echo in our ears, it is important as women to focus on maintaining our own good health while attending to family, career and volunteer activities.

National Hadassah announced a new health initiative at this summer’s business meeting held in Baltimore, MD. Every Beat Counts: Hadassah’s Heart Health Program educates women about risks, prevention and detection of heart disease, the #1 cause of death among women in the US and worldwide. It is fact that cardiovascular disease kills more women than men in the US and women present symptoms differently than men.

Did you know that:
- 42% of women have heart attacks within one year (vs. 24% for men)?
- 1 in 3 women over age 20 has some form of cardiovascular disease?
- A woman is 10 times more likely to die of a heart attack than breast cancer?

Hadassah now has educational tools and resources for its members to learn about risk factors and warning signs of heart disease.

At her June 20th concert in Tel Aviv, Barbara Streisand gave a “shout-out” to Hadassah Hospital during a question and answer segment of her performance. Someone asked about Ms. Streisand’s interest and support of women’s heart health with her new Institute in California. Barbara Streisand mentioned that the research at her facility was similar to the research done at Hadassah Hospital. Irene Pollin, a significant donor to the California hospital has also provided a huge grant in 2010 for Hadassah’s Linda Joy Pollin Cardiovascular Wellness Institute in Jerusalem to promote heart health in women. The institute is named in memory of Irene’s daughter Linda Joy who died at the age of 16 from heart disease.

This interest and progress in cardiac care is nothing new for Hadassah. In 1964, Hadassah was the first hospital in Israel to perform double bypass surgery. The first successful heart transplant performed in Israel was at Hadassah in 1986. The Cathlab team at the HMO’s Heart Institute performed the first trans-catheter implantation of aortic valves in 2009. And, this year, 2013, our hospital was the first multidisciplinary facility to treat pediatric vascular defects in Israel.

Be proud of our hospital’s accomplishments! Take advantage of the resources that our wonderful organization offers to educate us about health issues. Give generously to continue the life saving research and treatment provided by HADASSAH.

Be well and stay healthy,
Susan Anderman Singer
Anne Frank Group President

Education...

How do Jews tell time? The calendar used by most of the modern world is based on the sun. It takes 365¼ days for the Earth to revolve around the sun, so we divide the year into 12 months with an extra day every 4 years.

The Jewish calendar, however, is based on the moon. When the new moon is observed, it is the start of a new month in the Jewish calendar. The thin sliver of the moon that signals the start of another cycle is called the head of the new month, Rosh Hodesh. The moon grows thicker each night until it is full, and then gradually, night by night, becomes thin again. Finally, the moon disappears altogether. When the sliver appears again the following night, it is again a new moon and is again called Rosh Hodesh.

There are 29½ days for each cycle so Jewish months are 29 or 30 days long. If we followed only this pattern with one month following the next, 12 months a year, we would soon be out of sync with the seasons. So we insert a leap month in the Jewish calendar and have an extra month every 2 or 3 years. It is called Adar II, following Adar I in the cycle. Since we read the Torah every Shabbat, there are extra readings (parsha) to allow for the extra month.

Today, Rosh Hodesh is still observed, particularly by women. Special prayers are said. It is seen as a new beginning, almost like a mini-Rosh Hashana. We are renewed each month and it is cause for celebration.

Helen Weinheimer,
Anne Frank Group Co-Education VP

**PRESIDENT’S MESSAGE...**

Please Take Note!

Today is Labor Day. The holy days approach. By the time this reaches you we will be into a new season of so many activities.

Your group officers and board have planned some changes for the fall season - Wednesday meetings @ 7:30 pm for regular meetings with exciting programs, and board meetings @ 6:30 pm preceding those meetings.

But, alas, we do not have a slate of new officers to carry on in January. We need to acquire new energy and volunteers to fill our leadership positions. Please think of all the good Hadassah does - in medicine, in education, and in the area of women’s rights. Think of how nice our social contacts have been. Consider whether YOU can step up to the plate to help keep Golda Meir @ Lions Gate Group alive.

I thank everyone for past efforts and future ones. Keep in touch!

Israelis to Join Human Brain Project

Some of the best brains in Israel will spend the next ten years devoted to a multinational effort to advance the understanding of the human brain.

Launching later this year, the Human Brain Project will gather information about the brain from various advanced research approaches, with the aim of building supercomputer models and simulations of brain activity. The project is hoped to lead to a better understanding of the brain and brain disease.

A group of eight Israeli scientists, led by Prof. Idan Segev of the Edmund and Lily Safra Center for Brain Sciences at the Hebrew University at Jerusalem, by Prof. Yadin Dudai of the Weitzman Institute of Science and by Dr. Mira Marcus-Kalish of Tel Aviv University will be involved in this ambitious mission, along with colleagues from universities and research institutions across the world.

Israeli President Shimon Perez, a long-time supporter of brain research among scientists from many countries, noted that the participation in this project of Israeli scientists testifies to the country’s leading role in the field.
