Be part of a growing, dynamic and innovative company in the subprime automotive lending space. Global Lending Services (GLS) is a national subprime lender that provides automotive financing to franchise dealerships throughout the U.S. Through the use of leading edge technology, GLS is able to offer dealers great products with exceptional service levels.

GLS is seeking a results oriented IT professional in Greenville, SC to support our growing organization as **SQL Business Intelligence Developer.**

What does it mean to be a SQL Business Intelligence Developer at GLS?

The **SQL Business Intelligence Developer** is responsible for building fast, reliable, and business focused information systems. This is a phenomenal opportunity to interact with senior leadership throughout the company, learn the business, and drive tremendous value. SQL BI Developer will work on projects in the areas of Data Warehousing, ETL Development, Business Intelligence, Data Analytics, and Data Visualization. This position will consult with Data Analysts and Business Users toward the efficient and effective use of SQL to perform their analytic and Business Intelligence functions. In addition, this position will help design, develop, and implement standardized ETL processes used to populate reporting marts, the data warehouse and business data marts.

What will you do each day to ensure success?

- Collaborate with analysts and department leaders to design, build, and customize reports and reporting packages using SQL Server, SSRS, and Power BI
- Create processes and tools to monitor and improve data quality and system stability
- Automate manual data processes, optimize user queries, and facilitate data research and understanding while partnered with analysts and business specialists
- Participate in the development of new ETL processes to make new and existing data sources readily available to statisticians, analysts, applications, and outside business partners using SQL Server and SSIS

What should you already know to be successful in this role?

- Bachelor's degree in Information Systems, Business, Economics, Finance, Statistics, Mathematics, Computer Science, Accounting, or a related field
- Proficiency in SQL including Joins, Inserts, Updates, Creates, Alters, Subqueries, Pivots, Loops, Cases, and basic data transformation functions. Experience in SQL Server and SSIS a plus
- Knowledge of relational database management systems required. SQL Server preferred
- Experience building graphs and charts to communicate business information. SSRS and Power BI experience a plus
- Exceptionally self-motivated, self-directed, and able to maintain focus in a rapidly changing environment

- Highly organized and able to communicate in details as well as abstractions
- Financial Services and process improvement experience a plus
- Preferential consideration given to candidates with experience programming in batch (ex. PowerShell, DOS, [K]SH), compiled (ex. C#, Java, Python, VB[A]), and/or client/server (ex. PHP, ASP, VBScript, JavaScript) technologies, as will experience with un- or semi-structured data (ex. Xproc, Hadoop, Hive, Pig)

Employment Requirements:

Must be able to pass criminal background check, credit check and drug screen

Physical Requirements:

- This position requires being able to sit for 8 hours a day
- Able to communicate verbally and in writing

Schedule:

This position is full-time, requiring minimal schedule flexibility
