

## CPR - 3 Breathing Life into the World

*Through Relief, Rehabilitation, and Development*

Continued...

O'Deens believes that CPR-3 has found a process for eradicating malnutrition and creating sustainable jobs through the cultivation and sale of the highly nutritious leaves of the [Moringa tree](#), a species native to Haiti. Astoundingly, a portion of the Moringa leaf has 7 times more vitamin C than an orange, 4 times more vitamin A than a carrot; 4 times more calcium than in milk; 3 times more Potassium than in a banana; 3 times more iron than in spinach; and 3 times more vitamin E than in almonds. In 1 teaspoon you will find these vitamins and nutrients: A, B1, B2, B3, C, E, Calcium, Chromium, Copper, Iron, Magnesium, Manganese, Phosphorus, Potassium, Protein, Zinc.

Currently, CPR-3 employees and partners are reaping the harvest of the first 5 acres of a dense jungle of Moringa in Cabaret. The leaves are first dried on racks and then ground into powder. In the US, consumers will be able to purchase the powder in pill form as a dietary supplement. The first 500 pounds of Moringa powder is in California being bottled for sale on Amazon. For every pound of Moringa sold in the US, CPR-3 will give a pound of the nutritious powder to a child in Haiti. It is added to a meal to greatly increase its nutritional content. To find out more about the Moringa Project, please email Dan O'Deens at [dano@cpr-3.com](mailto:dano@cpr-3.com) or visit their [website](#).
