Dragon Professional Group V14 and SpeechExec Pro V8.8

Although this version of Dragon is not currently supported for use with SpeechExec software, the guidelines provided in this document may result in trouble-free integration.

Please note. As this Dragon version is not currently supported by Speech Processing Solutions, if you still encounter issues with the integration, no additional support can be offered at this time!

Dragon Professional Group V14 Preparation

Installation order: Install Dragon before installing SpeechExec software

- Completely close the Dragon software before installing the SpeechExec software as certain, shared, support files may be running that will cause the installation of the SpeechExec software to fail.
- If the SpeechExec software has been installed before the installation of the Dragon software, you must run a 'repair' on the SpeechExec software after installing Dragon.

The SpeechExec software should not be configured to use Dragon Pro Group 14 until the following conditions have been met!

Dragon Profiles Location: Dragon must NOT be configured to use Dragon Roaming profiles!

- Currently, SpeechExec integration will only work if Dragon Pro Group 14 is configured to use Local Dragon profiles.

Dragon Users (Profiles): User profiles must be created directly in the Dragon Pro Group 14 software!

Dictation Hardware association: Hardware such as SpeechMikes and / or DPM devices must be added to a Dragon User Profile from within the Dragon Pro Group 14 software only!

Dragon Profile Training: Hardware training must be done directly inside Dragon Pro Group 14 software!

SpeechExec Pro V8.8 Settings

Now that you have completed the above steps, you may launch the SpeechExec software and 'integrate' it to the Dragon Pro Group 14 software.

Pro Dictate example:

Place a checkmark to enable Dragon integration.

SpeechExec detects that Dragon has been correctly configured to use only LOCAL Dragon User profiles.

SpeechExec is presented with a drop-list of local Dragon User profiles. Example is (User)

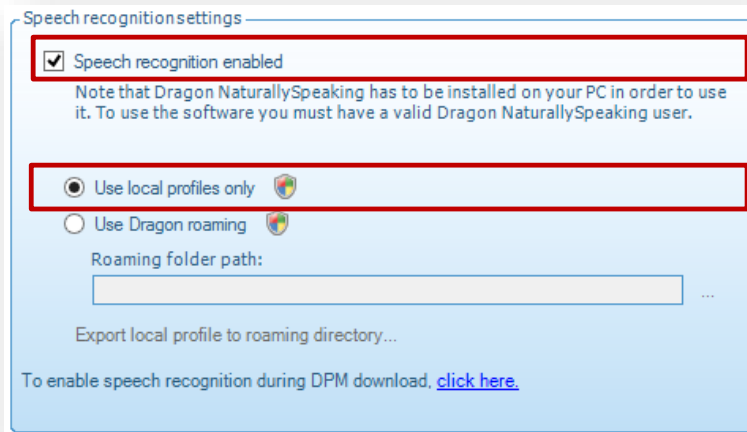

In this example, the Dragon user (User) has a USB SpeechMike and DPM 8000 configured for use with Dragon.

SpeechExec is now correctly configured to work with Dragon.

Pro Transcribe example:

Place a checkmark to enable Dragon integration.

SpeechExec detects that Dragon has been correctly configured to use only LOCAL Dragon User profiles.

SpeechExec is now correctly configured to work with Dragon.
