Release Announcement
DPMConnect4Mac

V1.4

Dear Speech Processing Solutions partner,

We are pleased to announce that we have released DPMConnect4Mac version 1.4.

DPMConnect4Mac now supports downloads from our latest development the 'SpeechAir' smart dictation recorder as well as the latest Mac operating system Mac OS X 10.11 El Capitan.

Background information

In the legal and medical environment the Mac platform becomes more and more fashionable.

Many companies already also support the *Bring Your Own Device* policy where end users can decide by themselves which device they would like to use for their daily work.

In many cases this is nowadays a MacBook.

It is therefore quite natural that users expect to download dictations via their Mac into the company network while their assistants are still working with a standard Windows PC.
This document describes the details to the release of this software product.

With kind regards,

Wolfgang Spannlang

INTRODUCTION

DPMConnect4Mac has been redesigned to download DSS and DS2 dictation files on a Mac computer from professional Philips 'DPM' and 'SpeechAir' dictation devices into a company network.

The software allows configuring several download settings such as target folders and automatic subfolder creation.

It is also possible to specify download rules which enable the user to automatically download only specific dictations.

To also support mixed environments, where competitor devices are used, DPMConnect4Mac also supports the download from Olympus DS-5000 and DS-3400 including the used subfolder structure.

HIGHLIGHTS

SUPPORT AUTOMATIC DOWNLOADS FROM SPEECHAIR

This release supports automatic downloads from a SpeechAir to a predefined destination folder.

If the 'delete after download' option is enabled DPMConnect4Mac also deletes the corresponding XML file on the SpeechAir that is automatically generated with every new dictation.

SUPPORT FOR MAC OS 10.11

DPMConnect4Mac 1.4 is tested and released with Mac OSX 10.10. Yosemite and Mac OSX 10.11 El Capitan.

KEY BENEFITS

Simplicity is key

- Convenient download of dictations from a DPM or a SpeechAir on a Mac
- Small footprint application running as *Menulet* in the Mac menu bar
- No need for additional licensing

Satisfy your needs

- Configure the most important download settings according to your personal working style
- Tailor your download workflow according to your personal preferences
- Create subfolders based on keyword definition

Ease of use

- Simply connect your DPM or your SpeechAir and the download starts
- No need to start up an application to download dictations professional Philips recorders
- Detailed description of download options in the online help
