CUSTOMER NEED

Do you need to identify rich data, analyze it, and provide actionable insights enabling automatic identification and data capture to unlock greater business value? Several businesses benefit greatly from using forklift automation and safety solutions.

Do your workers go to the wrong location to perform a task? Not only is this inefficient, but it is a huge contributor to many of your worker errors. The ability to more effectively manage lease overages and unbalanced fleet aging, and utilize location error analysis increases visibility to safety and liability performance ensuring maximization of worker performance.

APPLICATION SOLUTION

Vehicle Mount Computers provide vehicle performance insights to help optimize warehouse vehicle utilization, improve worker safety and compliance and helps foster a culture of enhanced vehicle awareness and transparency.

Unlike other approaches that effectively exclude organizations with limited IT resources, our secure, cloud-based solutions ensure straightforward, scalable results for organizations of all sizes.

The forklift automation and safety solution offers an integrated front and rear camera with video to provide new levels of ongoing observation and learning. Identify inventory damage-prone behaviors, which will allow you to retrain your workers to avoid them in the future. Resolve incidents from the floor as well as from your office. Access event video, reports, alerts and notifications online.
