SafeGuard ALERTS!

The MacGuys+™

An Early Warning System for your Mac

Do you know that if your hard drive fails you could lose everything, including your photo and music libraries?

Imagine you are working on an important project and your Mac stops working. You drive to the Apple Store to see what they can do, but they tell you your hard drive has failed. Everything stored on your hard drive, including all your family photos, music, movies, and address book is now inaccessible. IF your data can be recovered, it will cost you about $2000.

If only your computer could have an early warning system that told you your hard drive was about to fail! Now it can!

Safeguard Alert checks a number of potential issues including but not limited to:

- Failing hard drive that could turn into data loss
- Memory issues that can slow you down
- Malware problems
- Failing batteries that can damage your computer
- Backup problems (do you know that your backup is even working?)
- Network errors
- And much, much more!

How does SafeGuard Alert work?

We install a small app on your computer that works silently in the background alerting our Apple Certified Support Team of any potential problems. They then notify you about the issue along with a plan of what you can do to proactively address the problem. That empowers you to be able to take the necessary steps to restore your computer to maximum functionality and/or protect your data.

The app is safe and secure. We have no access to your computer or personal data.

For less than $10/mo you can protect your irreplaceable family photos, music, movies, and documents safely and securely.

Sign up today to protect your data, pictures and videos.
