

**ADDRESSING WATER RISK AND IMPROVING WATER STEWARDSHIP IN NORTH AMERICA:
ALLIANCE FOR WATER STEWARDSHIP OFFERING TWO DAYS OF TRAINING**

ARIZONA STATE UNIVERSITY, NOVEMBER 12th & 13th

[The Alliance for Water Stewardship-North America](#) will be hosting training on the *AWS International Water Stewardship Standard* in Tempe, Arizona on the campus of Arizona State University (room location to be announced soon).

Now is the time for Arizona companies, consultancies, NGOs and other interested groups to promote individual water use responsibility and watershed-based collective actions to ensure Arizonans and other water users and managers in North America can continue to access quality water for business, personal and recreational needs.

AWS-North America seeks to develop water users and managers into world-class water stewards who protect and enhance freshwater resources for people and nature. [The International Water Stewardship Standard](#) (the "AWS Standard") is designed to support, recognize and reward collaborative efforts to manage shared water challenges while providing a strategic framework for companies to better manage water resources and associated costs and risks.

The first day of training (*Foundations of Water Stewardship*) will introduce water management and sustainability professionals to the AWS water stewardship system and certain water management concepts while equipping them with the knowledge they need to implement or promote water stewardship at site and watershed levels. The second day of training (*Advanced Training in the AWS Standard*) is geared toward individuals implementing the AWS Standard in their operations or those interested in gaining AWS accreditation for consulting, auditing or training services.

Cost per participant will be \$450 or \$800 for attending both days. This includes course material, lunch and refreshments. Travel or accommodation costs are not included. Reductions are available for non-profit organizations.

Foundations of Water Stewardship and *Advanced Training in the AWS Standard* are based on implementation of the AWS International Water Stewardship Standard, a standard owned by the international Alliance for Water Stewardship (AWS). Together these courses meet Levels 1 and 2 requirements for professionals seeking AWS accreditation as auditor, consultant or trainer.

For more information and registration details, email AWS-North America at aws@thewatercouncil.com or call 1 (414) 988-8749.
