

## Sun Coast Driver Audits

Sun Coast performs audits on Frac crews as well as mainstream drivers. Audits are performed by either Frac or safety managers within the company. These audits consist of making sure employees are wearing all proper PPE, have all of their certification cards up to date, setup on site or at location is correct and well organized, employees are performing all proper Sun Coast fueling procedures, all paperwork is in order and up to date, and a good report from the customer. Perfect audits are not easy to come by and the crews or drivers that get these perfect audits are viewed in very high regard. They are recognized for their hard work and effort across the company and all managers are made aware of their accomplishment. These crews who get these perfect audits are typically the best crews we have and are often used as an example for other crews to strive to be like.
