

System Security Requirement

Transport Layer Security (TLS) 1.0, 1.1, and 1.2 must be activated in your web browser by September 30, 2015 in order to access the QIES National Systems, including the MDS 3.0 and OASIS Submission Systems. Follow the steps below to activate TLS 1.0, 1.1, and 1.2. The changes should be made now.

Note: You must have administrative rights to your workstation in order to update this value. If you do not have administrative rights, contact your IT support.

Open the Internet Explorer browser.

1. Select "Tools" from the Menu bar.
2. Click on "Internet Options".
3. Select the "Advanced" tab.
4. Underneath "Security", ensure that the box next to "Use TLS 1.0", "Use TLS 1.1", and "Use TLS 1.2" are checked (these should be located near the bottom of the list).
5. Click "Apply".
6. Click "Ok".

Note: Windows Vista does not support the TLS 1.2 security update; therefore, support for Windows Vista will end 9/30/2015. Vista users will need to upgrade to Windows 7. If you have any questions concerning this information, please contact the QTSO Help Desk at 1 (800) 339-9313.
