

# Hasegawa Tripod Ladders

**3 Legs...Wide Base...No Wobble...Remarkably Light...**

**The safest, most stable, and most practical garden ladders around.**

Engineered for Safety, Built to Last

These aluminum, tripod ladders are used all over Japan and Europe, and now in the U.S., by gardeners and nurserymen. Our customers include tree surgeons, topiary specialists, institutional and estate gardeners, orchard owners, hedging contractors, permaculturists, and landscapers, as well as countless gardening enthusiasts who all appreciate the stability and practicality of the tripod design.

The **wide base, deep steps, telescopic back leg**, as well as **broad clawed feet**, and **flat top** make them incredibly safe and easy to use.\* Rather like the design of the Eiffel tower, your weight is directed downwards and outwards, pinning the ladder to the ground.

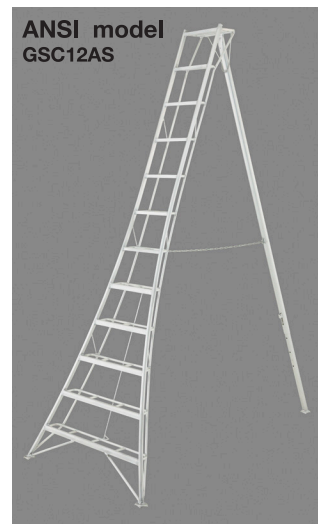

The back leg adjusts quickly and easily up to 2' in 6" stops with a **spring-loaded pin**, extending 6" and shortening 18" for use on slopes and uneven terrain. How flat is your garden?

Welded, extruded aluminum construction, weatherproof, strong and very light. Double rungs are easy on the feet, and resist getting muddy or slippery.

Hasegawa has the reputation for making the best quality and safest tripod ladders in use today—our production conforms to JIS (Japanese Industrial Standards).

## ANSI Tripod Ladder - TYPE IA-300 lbs Rating

Model	Size**	Weight	Base Width	Spread	Length	SSH***
GSC6AS	6'	19 lbs	49"	59"	75"	4'

\*As with all tools, safety is the responsibility of the user and dependent upon ladder being used in a safe and reasonable manner, and for the purpose intended. Use of ladders on hard surfaces such as concrete requires installation of GSC-G hard-surface accessory kit pictured above and available for purchase separately.
