Def prices change often, check with your salesperson for the most current market price.

CONTAMINATED DEF WILL :

- Cause on road breakdowns void vehicle warranty
- Cause premature Catalytic Converter failure
- Foul injector nozzles
- Increase DEF usage

DEF IS EASILY CONTAMINATED :

- If your containment, pump, or hose, once had diesel fuel in it... Don't put DEF in it. If it was used for Diesel Fuel it is wrong for DEF
- DEF is contaminated by contact with most metals and tap water

AVOID THE CONTAMINATION OF DEF WITH DUST OR SOIL AT ALL COSTS

The whole storage system of tanks, pipes, pumps, filters, tanks and such have to be used solely for DEF to prevent cross-contamination with other chemicals. Because DEF is easily destroyed by mishandling & poor practices, it only makes sense to let a Flamingo be your bulk distributor. We have the equipment & experience to keep your investment protected.
