## PRODUCT OVERVIEW

**Green Way Laboratories, Inc. (GWL)** is pleased to announce the launch of our first patented cleaning product. **MastiClean** is a revolutionary step forward in the cleaning market, in that our product, is the first non-toxic, non-solvent based cleaning solution that can safely remove oils, greases of all types, including tough to clean asphalt roofing tars and sealants. Elastomeric sealants, tars, and coatings are used in many applications specifically in the construction industries, and they are commonly made from heavy petrochemical bases that are difficult to break down and remove from your skin, clothing, tools, and other non-porous surfaces. **MastiClean** is able to remove many of these different substances quickly and effectively, without compromising the health and safety of the user. GWL was formed to research and develop innovative green cleaning solutions for multiple markets and industries. Our mission is to develop products that are high performing, safe and non-toxic.

The ingredients that make up our **MastiClean** formula are Determined Safe For The Environment (DfE) by the EPA (Environmental Protection Agency) and by REACH (Research, Evaluation, Authorization and Restriction of chemical substances) the European Commission for the regulation on chemicals and their safe use. **MastiClean** has C-1 and E-4 certifications from the NSF (National Sanitation Foundation which certifies products for safe use around the preparation and consumption of food.

**MastiClean** features a proprietary formula containing eco-friendly surfactants, saponifiers, and emulsifiers that allow **MastiClean** to quickly breakdown many long chain hydrocarbon structures so they can be safely removed.
