

“Innovation, Entrepreneurship & the Economy in the US, China & India “

*This book is about innovation and entrepreneurship and the role it plays in the US, Chinese and Indian economies. Innovation and entrepreneurship have transformed the western world. The impact on the US economy has been to transform the US into the most dominant economic power of today with the world's largest GDP. However, the information revolution and globalization that we are experiencing today is also transforming the world – especially China and India. While innovation and entrepreneurship have driven the US to its present status as the most dominant economic power of today, can the US continue on that path? China and India used to be dominant economic powers several centuries ago, but due to a number of social and political reasons, these two nations lost their economic clout, and their economies were dwarfed by western economies. **While both these countries have shown significant growth in recent decades, can that growth be sustained? This book looks at what are the factors that are important for innovation and entrepreneurship to thrive; how these factors compare between US, China and India; the evolution of these factors in the past; and, the pointers they give us about the future - hence about the likelihood for continued growth in these economies.***

Sunday, September 20, 2015 | 1:30pm – 3:30pm
Bharatiya Temple
6850 N Adams Rd, Troy, MI 4809
