Emily Hough speaks to Henri Ladyi, who demobilises rebel militias, especially child soldiers, in DR Congo

The final push for a climate deal at COP21 was ongoing as *CRJ* went to press.

Meanwhile, rainfall of near biblical intensity had lashed many areas, including Sierra Leone, India, the UK and France.

The theme of this issue is water, including flooding, of course. Time and time again, our expensive defences built to protect communities and infrastructure seem to fail, our models and predictions become overwhelmed by ever more extreme climate events. As Patrick Lagadec has often stated: Are we fighting the last war?

And this is a controversial question, but one that needs to be asked: When do areas become too dangerous for human habitation? Should relocation – as a strategy of last resort – be discussed more widely? Last year, the San Remo consultation, organised by UNHCR, examined the issue of planned relocation owing to sudden onset disasters, acute environmental degradation and longer term effects of climate change. It found that those working on climate change adaptation frameworks are often unfamiliar with the experiences of resettling communities, whether as part of dam projects or resettling refugees in other countries. "The silos which characterise work on this issue are immense," it said, which is worrying, given the virtually unimaginable long-term, generational, financial and human costs relocating vulnerable or untenable communities would entail.

It would take a brave – or possibly politically suicidal – government to tell large numbers of its citizens that it can no longer shield them from extreme climate events and that relocation is the least unattractive option.

In a draft document ahead of COP21, the UN proposed a climate change displacement co-ordination facility, to provide organised migration and planned relocation, as well as compensation to people fleeing rising sea levels, extreme weather and ruined agriculture. The reference was dropped from the draft.

But it is clear, though decidedly unpalatable, that relocation will have to be considered in some areas and the duty of all those involved in emergency preparedness, mitigation and response is to familiarise themselves with existing experience and consequences, and consider how this could affect them, their roles and communities.

# A continued and evolving threat

The 7/7 bombings in London were a wake-up call for the police and security services on the threat from Islamic militancy in the UK, writes **Roger Gomm**, and the more recent attacks – including those in Paris – have added critical impetus to the need for preparedness

**O**n August 29, 2014, the UK threat level for international terrorism was raised to 'Severe', meaning an attack is highly likely; the threat remains at this level in the wake of the Paris attacks. At the time Assistant Commissioner Mark Rowley, the National Policing Lead for Counter-Terrorism, highlighted the need for organisations to ensure that they are prepared. "We need businesses to check that their security measures are effective and train their staff to detect potential threats and, if necessary, respond to an attack. Experience shows us that terrorists target busy, well-populated places to ensure that attacks have a maximum impact. Businesses, particularly those in crowded places, have an invaluable role to play in our fight against terrorists, violent extremists and other criminals. Their staff are often the first people to spot signs that something is wrong."

In November 2014 Sir Bernard Hogan-Howe, the Commissioner of the Metropolitan Police Service, noted that, with respect to potential terror plots: "We've said on average over the last few years it's been about one a year. But this year alone we think four or five."

Despite the efforts of the police and security services, the threat has not decreased, the UK remains at 'Severe'.

In mid-October this year, the head of MI5 warned that Britain faces an unprecedented terror threat from Islamic State and Al-Qaeda fanatics using the Internet to plot mass casualty attacks.

In a rare public speech, Andrew Parker, Head of MI5, said the threat from home-grown and foreign jihadist was: "On a scale and at a tempo" never before seen in his 32-year career. The director-general of MI5 said there was now a "greater ambition" among terrorists to carry out mass casualty attacks on Britain and warned that the threat: "Shows no sign of abating."

He warned: "It may not yet have reached the high water mark," and added that terrorists had ruthlessly exploited the explosion in modern communication technology, such as smartphones, and were using a "bewildering array of devices and digital platforms" to plot attacks.

He admitted for the first time that MI5 now had to carry out computer hacking attacks against terror networks to access their encrypted communication networks.

There are limits  
to what the state  
alone can achieve

This was at the time that GCHQ, MI5 and MI6 have opened their doors to journalists and revealed a number of state secrets of Britain's £2 (£2.7; \$3) billion espionage systems ahead of the publication of the controversial draft *Investigatory Powers Bill*, which demands that the police and intelligence services be handed greater powers to access information from its citizens.

The increased likelihood of an attack from terrorist groups such as Islamic State contributed to the threat level moving to 'Severe'. Of particular concern are UK-born radicalised Islamic extremists, some of them returning from conflict areas such as Syria or Iraq, armed with the knowledge and skills to conduct terrorist activities.

Over the past year there have been a number of cases of young Britons travelling to join ISIL in Syria and Iraq, as well as the prosecution of the UK's youngest terrorist, a 15-year-old boy convicted of inciting another person to commit an act of terrorism overseas.

According to latest police figures, there were 338 counter-terrorism related arrests: 157 were linked to Syria and 56 were under 20 years old, which is a growing trend.

In October the UK government's new one-nation *Counter Extremism Strategy* was launched to confront and defeat all forms of extremism. It included the extension of passport removal

powers to under-18s to prevent those at risk from travelling to join terrorist groups, and new measures to automatically bar convicted terrorists from working with children and vulnerable people.

The strategy strengthens the role of the Disclosure and Barring Service (DBS) to ensure anyone with a conviction or civil order for terrorist or extremist activity is automatically banned from working with children and vulnerable people, in the same way as individuals convicted of sexual offences against children. Around 5,000 children were in institutions affected by the Trojan Horse plot, where extremists gained control of several schools in Birmingham, UK. Separate barred lists are maintained for work with children and work with adults.

The new powers extend a measure introduced by the Prime Minister in July, following a successful trial, which enables parents to apply directly to Her Majesty's Passport Office to have the passports of children under 16 years old cancelled to prevent them travelling to join terrorist groups in Syria and Iraq.

Parents concerned that their 16 and 17 year old children are at risk of travelling abroad under the influence of extremists will be able to apply to have their passports removed and several under-16s have since been protected.

It also comes after a series of successful court order

applications by local authorities to protect children at risk of travelling, either by their own choice or as part of a family unit.

The new Strategy follows the four key pillars set out by the Prime Minister, David Cameron in his speech in Birmingham in July:

- It will vigorously counter extremist ideology – making sure every part of government is stepping up to the plate;
- It will actively support mainstream voices, especially in faith communities and in civil society. That means supporting all those who want to fight extremism, but are too often disempowered or drowned out in the debate;
- It will disrupt extremists, aggressively pursuing the key radicalisers who do so much damage; and
- It will seek to build more cohesive communities, tackling the segregation and feelings of alienation that can help provide fertile ground for extremist messages to take root.

At its launch Prime Minister David Cameron commented: "I have said before that defeating Islamist extremism will be the struggle of our generation. It is one of the biggest social problems we need to overcome." He added: "The government's new *Counter Extremism Strategy* is a clear signal of the choice we have made to take on this poisonous ideology with resolve, determination and the goal of building a greater Britain.

"And a key part of this new approach is going further to protect children and vulnerable people from the risk of radicalisation by empowering parents and public institutions with all the advice, tools and practical support they need," the Prime Minister continued.

The UK government has a clear national security strategy: To ensure a secure and resilient country by protecting people, economy, infrastructure, territory and way of life from all major risks that can affect them directly. To support this, like most countries, the UK strives for 'resilience' – the ability to continue through disruption and adapt to longer-term change in order to attain strategic goals. However, there are limits to what the state alone can achieve. There are critical dependencies between public-private sectors and, as such, business and community preparedness and resilience are vital elements.

## Risk misperceptions

Islamic State is unlike previous terrorist groups, requiring organisations to re-evaluate their current threat analysis. In a society where a story in the media can damage reputation and lead to financial losses, it is imperative that organisations act to not only protect their physical assets, but also their intangible aspects. The nature of threats is evolving and the way in which all organisations respond to these must adapt accordingly.

Many countries face budget constraints that prohibit the investment necessary to finance effective prevention, protection and recovery measures.

The impact of this is that pressure will mount on policymakers to reinforce the resilience of communities and individuals and to reapportion their share of the burden. In reality the benefits of investing in protective measures are often not seized upon by property owners, owing to their misperception of risks, their short-term outlook and the upfront costs of implementation. All governments should continue to strengthen public resilience by encouraging property owners to adopt mitigation methods through education of risks and ensure all organisations have a proven capability to respond to and recover from a terrorist incident.
