

have you heard? fiber has been delivered to your area

and now your business can experience the difference

Internet access for voice and data networking has become the essential requirement for the modern business enterprise. The Internet is used to connect to your customers, vendors, business partners and your own remote sites. With rapidly changing technology comes greater network demands and increased bandwidth requirements. Now is the time to transform your network to enable your business of tomorrow.

Combine managed Internet with voice and data through fiber technology that delivers an increasingly integrated experience.

Speed matters

This is no ordinary Internet; boost your speeds starting at 10mbps of dedicated Internet access to stay connected with your customers, business partners and employees.

It's more than an Internet connection

You get a more reliable access with 24x7x365 technical support. Plus your connection to the Internet is dedicated and not shared with other businesses.

Empower your business

Fiber technology brings you improved efficiency by converging voice and data over the same transport by using SIP trunking. Leverage your

unused bandwidth and maximize existing investments by dynamically allocating bandwidth to create an IP WAN that will support features such as IP conferencing, instant messaging, unified communications and presence management.

Get outstanding performance, better security and control, with the right fiber-based solution that will help deliver your company into the future.

To find out more about this and other exciting solutions, contact your local AT&T Solution Provider.
