

This is
your
brain...

...with
ADHD

The Basics

- The study is evaluating whether an investigational medication can provide prolonged relief of ADHD symptoms.
- About 360 adolescents from across Canada and the United States will be participating in this study.
- Clinical studies provide insight and increased awareness to the medical community.

Struggling to complete tasks?

Disorganized?

Can't stay focused?

Restless or fidgety?

~

Having difficulty managing
your ADHD symptoms?

Who can Participate?

- Adolescents 12-17 years old.
- Those unsatisfied with their current pharmacological therapy.
- Those not currently receiving pharmacological therapy for their ADHD symptoms.

What are the Benefits?

Participants will receive:

- Study-related medication
- Study-related checkups

You will be making a contribution to medical research.
