Committee on Pediatric Workforce State Pediatrician Workforce Survey

The AAP Committee on Pediatric Workforce (COPW) over a year ago launched the State Physician Workforce Survey through AAP chapters. In addition to learning more about workforce issues at the local level, the COPW hoped to identify state and regional trends that can be compared with national trends to get a better understanding of specific issues as well as the pediatrician workforce overall. The COPW has reviewed and assembled the most relevant and robust responses for your chapter. We hope these results will provide valuable information that can assist you in your efforts to advocate for the pediatric physician workforce and help ensure that children in your communities have access to pediatricians, pediatric medical subspecialists, and pediatric surgical specialists.

Hours Spent in Direct Patient Care

In a typical work week, Connecticut respondents spent over 80% of their time in direct patient care. Nearly 60% said that the number of patient care hours had remained the same over the past 3 years. Approximately 15% had decreased their patient care hours, while just under 30% had increased the number of hours devoted to direct patient care.

Location of Residency Training

The majority of the state’s physicians completed their residency training out of state.

Location of Medical School

The majority of the state’s physicians completed their medical education out of state.

Typical Waiting Time for a Non-Emergency Appointment

Approximately 43% of respondents said that they could see an established patient for a non-emergency appointment the same day. About 15% said that the wait time would be 1-2 days, and less than 10% said that the wait time could be 3-6 days. Approximately 70% of respondents reported that the wait time had remained about the same over the past 3 years, while just over 10% said it was shorter and just under 10% said the wait time was now longer than it had been 3 years ago. For new patients, wait times were longer. Only about 30% of practices reported that a new patient could be seen on the same day, and nearly 10% reported that a new patient could be seen in 1-2 days. Approximately 10% reported that the wait time for new patients was longer than it had been 3 years ago.
Practice Type

Over 90% of respondents said that they are currently in clinical practice, and the average number of years that they have been in practice is just under 20. Almost 50% of respondents are in a single specialty group practice. The next highest categories were hospital outpatient ambulatory site and multispecialty group practice. Each was reported by approximately 18% of respondents.

Effect of Technology (e.g., Use of Optimized EHR) on Practice

Survey participants were asked to consider what changes they might make if a new office system, such as the use of optimized electronic health records, increased their practice efficiency. They were given a range of options, such as changing their work hours, seeing more patients, or hiring additional staff. Close to 35% of respondents reported that they would be “very likely” or “somewhat likely” to reduce their hours, and approximately 40% said they would be “very likely” or “somewhat likely” to see more patients. Just over 15% reported that they would be “very likely” or “somewhat likely” to hire nurse practitioners, and approximately 30% reported that they would hire more support staff.

Experiences Referring Patients to Medical Subspecialists/Surgical Specialists over the Past Year

Approximately 22% of respondents rated the current number of pediatric medical subspecialists/surgical specialists in their area as “fair” or “poor.” Nearly 35% of respondents rated the current number as “good,” and the remainder rated the current number as “very good” or “excellent.” However, just under 15% rated wait times as “very good” or “excellent,” and about 55% rated wait times as “poor” or “fair.”

Workload Capacity with Respect to Patient Panel

- Closed to New Patients
- Too Large
- About Right
- Increase "a little"
- Increase "a lot"
- Do not have or control panel
