HOME VISITING EVIDENCE OF EFFECTIVENESS (HOMVEE)

CALL FOR STUDIES

SUBMISSION DEADLINE: JANUARY 12, 2015

Purpose

Mathematica Policy Research® seeks studies for a comprehensive review of the evidence base for home visiting programs. The review is being conducted for the U.S. Department of Health and Human Services (DHHS) by Mathematica Policy Research and will be used to help inform policy, new initiatives, and program directions at the federal level.

Background

In spring 2010, the Health Resources and Services Administration (HRSA) and the Administration for Children and Families (ACF), both within DHHS, announced the availability of FY 2010 funding for the Affordable Care Act (ACA) Maternal, Infant, and Early Childhood Home Visiting Program. The program emphasizes and supports successful implementation of high-quality, home visiting programs that have demonstrated evidence of effectiveness. The program is being administered by HRSA in collaboration with ACF.

To identify the home visiting programs that have evidence of effectiveness, on behalf of DHHS, Mathematica is continuing a comprehensive review of the evidence base. The review began in the fall of 2009. The results, as well as detailed information about the review standards, are available on the HomVEE website (http://homvee.acf.hhs.gov/). The purpose of this new Call for Studies is to continue and to update the existing review.

Eligibility

This Call for Studies is particularly aimed at identifying studies not previously reviewed by the HomVEE team including unpublished manuscripts (past or recent), conference papers, or new publications (currently in press) that are not included in databases searched for the review. Authors may also submit new evidence or findings that build on or expand previously reviewed studies (as long as the results are reported as new, stand-alone articles).

Apart from the Call for Studies, the Mathematica team will conduct keyword searches of electronic databases, searches for studies on websites of research and policy organizations with links to home visiting, and other search activities (see this webpage for details). All relevant studies from these searches will be included in our review, supplemented with additional studies identified through this call.

Studies submitted in response to this call should:

- Focus on home visiting programs targeted to pregnant women, expectant fathers and families with or caregivers of children ages birth to 5.
- Focus on programs in which home visiting is the primary service delivery strategy. This new Call for Studies will utilize the Maternal, Infant and Early
Childhood Home Visiting Program definition of home visiting. Programs that are primarily center-based with infrequent or supplemental home visiting will be excluded. Home visiting services should be offered to most or all participants and should be integral to programmatic goals.

- Have been prepared or published in 1979 or later.
- Provide the name and a detailed description of the home visiting program being evaluated, as well as the study methods employed.
- Target at least one of the following outcome domains:
  - Improvements in prenatal, newborn, and child health;
  - Improvement in child development and school readiness, including improvements in cognitive, language, social-emotional, academic achievement, and physical developmental indicators;
  - Improvements in family economic self-sufficiency;
  - Improvements in the coordination of referrals for, and the provision of, other community resources and supports for eligible families;
  - Improvements in maternal health, including improved pregnancy outcomes;
  - Improvements in parenting skills related to child development;
  - Reductions in child maltreatment; and
  - Reductions in juvenile delinquency, family violence, or crime.

**Submission Instructions**

Submissions should be e-mailed to HVEE@mathematica-mpr.com.

Submissions should include the following:

- An electronic version of the study in MS Word or PDF format
- A cover e-mail noting contact information for the lead or corresponding author, the name of the home visiting program being evaluated, and the study design—randomized control trial, quasi-experimental (comparison group, regression discontinuity, single case), non-experimental (such as pre-post or correlational), or implementation

**The deadline for submissions is January 12, 2015.**

Authors will receive acknowledgment of receipt of their submission but no indication of the possible inclusion of their study in the review.
