

Post-doctoral Research Training in Drug Abuse/HIV Prevention and Implementation Science at Arizona State University

ASU invites applications for our NIDA-funded T32 post-doctoral training program in focusing on closing the research-practice gap in drug abuse and HIV prevention.

Training is delivered through individually-tailored programs of coursework in drug abuse, HIV, and implementation science and mentored research experience. Trainees select multiple mentors from a large and interdisciplinary faculty whose work includes preventive interventions with children and families in settings including schools, health care, community mental health settings, and family courts. Emphases include implementation science for the adoption and sustainability of preventive interventions in natural service delivery settings, interventions for ethnically diverse populations, and quantitative methods in prevention science. Training is for a two-year period. For further information, please visit <https://psychology.clas.asu.edu/lab/research-training-primary-prevention-t32>.

Interested candidates should send (electronically) a vita, statement of research and training goals, and 3 letters of recommendation to: laurie.chassin@asu.edu by July 1 2015 and we will continue to review folders until the positions are filled.

Our training program follows the University's prohibition of discrimination in employment, educational programs, and activities on the basis of race, national origin, color, creed, religion, sex, age, disability, veteran status, sexual orientation, gender identity, or associational preference. We affirms our commitment to providing equal opportunities and equal access to University facilities.
