

Summer Learning Programs Help Indiana Kids Succeed

Summer break for children often brings to mind family vacations, camp, trips to museums and libraries, and an array of additional enriching activities with families and with summer learning programs. Unfortunately, research shows that the summer months can also be a time when children experience summer learning loss, falling behind in key areas like reading and math. Summer learning programs often play a critical role during the summer months to inspire learning, provide academically enriching activities, keep kids safe and healthy, and support working families.

In Indiana, **25% of families say at least one child attended a summer program in 2013**. However, the demand for summer programs exceeds the current rate of participation, with **46% of Indiana families reporting that they would like their children to participate**.

Support for additional summer learning programs is vital to give all children the opportunity to take part in fun and engaging activities; find new interests like cooking and video game design; explore their community's libraries, museums and parks; receive nutritious summer meals; and stem summer learning loss. And Indiana parents agree, with **87% supporting public funding for summer learning programs**.

Indiana findings from America After 3PM are based on in-depth interviews with 251 Indiana households with children, completed by way of an online survey using a blend of national consumer panels. Shugoll Research collected and analyzed the data for America After 3PM. In order to participate, respondents had to live in the United States and be the guardians of a school-age child living in their household. All interviews were completed between February 28 and April 17, 2014.
