

Seeing Orange – The RTC provides enhanced resources and tools to help plan your commute

As Southern Nevada rebounds from the economic recession, we are experiencing growth in population and development. That's why local governments, utility companies and private developers are investing in enhancing and maintaining our existing infrastructure and building new infrastructure to accommodate our current and future growth.

While this is good news for both our economy and our roadways, it has frustrated the public and tested their tolerance for roadway construction. The RTC launched Seeing Orange, a campaign to provide the public with critical and important information about construction projects. The community can call 702-928-CONE (2663) or visit seeingorangenv.com to submit questions and get project information.

Now, the RTC is doing even more to provide enhanced communication and resources to the traveling public. The RTC is convening key partners from local and state jurisdictions, utility companies, barricade companies, local developers, etc. to better understand the problem and develop possible solutions that could help alleviate traffic congestion and public concerns.

The RTC restructured its Utility Coordination Committee to include all local governments and utility companies. Now renamed the Regional Project Coordination Committee (RPCC), the RPCC will look at long-term construction projects and plan accordingly. Within the RPCC is the cone management working group, which is comprised of staff-level employees – the people out in the field – who meet regularly to discuss active construction projects, share information and plan cone coordination.

The RTC is also convening local construction companies and seeking their input on how to better coordinate and address orange cones at their work sites.

Lastly, the RTC is enhancing its Seeing Orange website to provide more content regarding projects and construction schedules. The RTC understands drivers are frustrated and is committed to improving coordination between projects and providing more information that will help commuters across the valley.
