

WATER / WASTEWATER TREATMENT CERTIFICATION PREPARATION COURSES

Employment of water and wastewater treatment plant operators is projected to grow 6 percent from 2014 to 2024. Job prospects should be excellent with seasoned operators retiring and their vacancies needing to be filled. Opportunities will be best for those with training or education in water or wastewater systems and good mechanical skills. - Bureau of Labor Statistics

THE KEY TO A SUCCESSFUL PLANT

Protecting the community's water resources is one of the most important jobs in the world. Certified operators are needed to perform these vital functions, and ongoing training is necessary to maintain certifications and stay up-to-date as new regulations and technologies emerge. For the safety of the environment and to protect your utility against unwanted fines and other legal implications, quality operators are key.

FAULKNER STATE Community College is launching a new program to connect local water and wastewater employers to a pool of interested students: the next generation of water and wastewater professionals in our area. The program will prepare students to take the certification test(s) required to work in this field.

Water and wastewater management careers are interesting, stable, local and profitable - and they are here to stay. Whether these students are new to the field or upgrading their skills, they are crucial to help close the gap between current workforce projections and expected retirements within the next decade.

Industry partners can support and strengthen the operator training program in several ways: by financially supporting classes through sponsorships, by committing to send current employees through the program, and by connecting students to internships and eventual employment.

Find out about this unique educational opportunity that supports those who are entering or advancing in the water and wastewater industry. Contact us today to find out more about becoming an Industry Partner and supporting a field that feeds our utilities and their customers.

CLASSES START THIS SUMMER!

INDUSTRY PARTNER, NORTH BALDWIN UTILITIES:

"Here at North Baldwin Utilities, we feel very strongly about the importance of operator training and education for the health of our nation's water systems."
