Product Information Bulletin – New Regulator ID Labels

RegO is proud to announce the implementation of our regulator ID Label program covering first stage, second stage and twin stage regulators (see attached list).

The ID Label provides an easy means to track and record valuable information about RegO regulators. The ID Labels are a two part sticker that includes the model number, serial number, date of manufacture, type of regulator, spring setting range and relief valve information.

Installing the ID labels are very easy to complete. They are designed so that the service person or installer applies one part to the regulator bonnet and the second part is then applied to Gas Check or company forms for record keeping purposes. The serial number on the ID Label then becomes a permanent means of record keeping and the serial number will be specific to that regulator.

RegO's ID Label program will be officially launched at the 2016 NPGA Trade Show in Nashville, TN.

Please review the sample regulator ID Label below and sample form attached. Please contact me with any questions you may have.

Thank You,

Ed Miller
